

Finesse
Designed for Life

The Finesse Window System when design & specification meets excellence!

- Chamfered frames to match traditional putty lines
- Decorative internal scotia bead which is pleasing to the eye
- **NEOPRENE** gaskets for enhanced draught proofing and air tightness
- High Impact Modified PVCu ensuring that the frames will withstand the wear and tear of daily use for many years
- Titanium Di-Oxide colour stabiliser ensuring that your PVCu will not fade or discolour
- Fully Steel Reinforced for maximum security and minimal expansion
- Energy Efficient sealed units for maximum insulation and noise reduction
- Warm Edge Technology **SUPER SPACER** for increased insulation and condensation reduction
- Multi chambered Profile - **FIVE** Chambers for maximum Insulation
- Egress Hinges – applied to all necessary upstairs window for easy clean and fire escape purposes.

Manufactured in our own factory to ISO 9001 Quality Standards.

Window Security

FOR YOUR PEACE OF MIND PLEASE TAKE TIME TO VIEW OUR VIDEOS DEMONSTRATING ALL OUR SECURITY DEVICES BEING RIGOROUSLY TESTED.

Shootbolt Locking System

Our shootbolt locking mechanism ensures that the opening windows are secured at the most vulnerable points on the window.

Internal Glazing

The glass or paneled units in our windows and doors are all fixed into position using internal glazing beads. This crucial detail makes it impossible to de-glaze the unit from the outside - a burglar's favourite method of attack

High Security Keeps

Our zinc cast keeps are extremely robust and secure the shootbolts because they are secured into our fully reinforced frames.

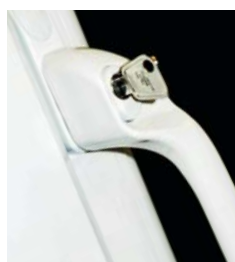

Full Steel Reinforcing

All our windows and doors are fully reinforced with steel. Therefore every screw is firmly anchored into steel. This is crucial!

Key Locking Handle

Our handles can be key locked (often a requirement of your home insurance policy) to give you further protection and peace of mind

High Security Sash Claws

To provide maximum security at the locking handle area of an opening sash we install 2 high security claws that secure themselves to the fully reinforced frame ensuring that a potential intruder will not be able to force the window open.

High Security Hinges

All hinges are high security specification. They add to the security of the window by locking the sash into position as it locates into the frame. This would otherwise be a vulnerable part of an opening window.

Hinge Protectors

We fit these to all sashes to further protect against crowbar attack. The hinge protectors clamp together under attack making it almost impossible to force the sash open.

High Security Cams

Each sash has a series of security cams with mushroom heads. In addition to assist in compressing the double sealed gaskets forming an air tight seal they engage into high security keeps running along the opening side of the sash which drastically increases the windows security.
